Serial No.: 10/624,404   Attorney Docket No.: 2002P03078US

IN THE CLAIMS:

This listing of the claims will replace all prior versions and listings of the claims in the application:

1.   (Original) A telecommunications system, comprising:
a packet network;
a first plurality of network clients compatible with a first voice protocol of said network;
a second plurality of network clients partially compatible with said first voice protocol;
a third plurality of network clients compatible with a second voice protocol;
a gatekeeper adapted to provide call control for said first plurality of network clients;
a feature proxy adapted to receive registrations of said first plurality, said second plurality, and said third plurality of endpoints that maps such registrations to registrations with said gatekeeper and provides feature processing for said first, second, and third plurality of endpoints.

2.   (Original) A telecommunications system in accordance with claim 1, wherein said feature processing comprises supplementary service feature processing.

3.   (Original) A telecommunications system in accordance with claim 1, wherein said feature processing comprises media stream feature processing.

4.   (Currently Amended) A telecommunications system in accordance with claim 1, wherein said feature proxy is further adapted to implement CTI (computer telephony integration) control of said endpoints.

Serial No.: 10/624,404   Attorney Docket No.: 2002P03078US

5.   (Original) A telecommunications system in accordance with claim 1, wherein each of said first plurality of network clients is mapped to a corresponding registration with said gatekeeper.

6.   (Original) A telecommunications system in accordance with claim 5, wherein each of said third plurality of network clients is mapped to a single registration with said gatekeeper.

7.   (Original) A telecommunications method for use in a telephony-over-LAN network, comprising:

receiving first registrations of a first plurality of network clients at a feature proxy;

receiving second registrations of a second plurality of network clients at said feature proxy;

mapping said first registrations to corresponding registrations with a network gatekeeper; and

mapping said second registrations to a single corresponding registration with said network gatekeeper.

8.   (Original) A telecommunications method in accordance with claim 7, wherein said first plurality of network clients are compatible with a voice protocol of said LAN.

9.   (Original) A telecommunications method in accordance with claim 8, wherein said second plurality of network clients are compatible with a different voice protocol.

10.   (Original) A telecommunications method in accordance with claim 9, further comprising said feature proxy interworking said first plurality and said second plurality.
